

# SETUP-XAMPP Apache Ports For PHP

## Step 1: Open Xampp Control panel Run as Administrator

## Step 2: Click On Config

## Step 3: In Apache(httpd.conf) Search for “1234” by Ctrl+F and replace all by “4444”

#Listen 12.34.56.78:1234 (line No : 57)

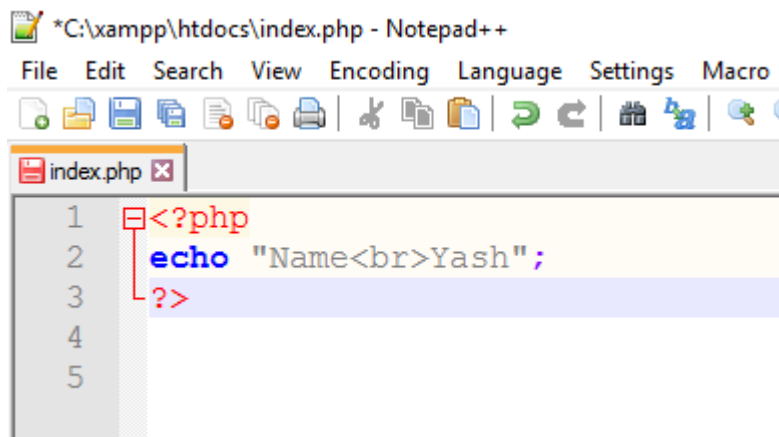

Listen 1234 (line No : 58)

ServerName localhost:1234 (line No : 220)

Similarly, Apache (httpd-ssl.conf) Search for “1443” replace it by “2444”

Listen 1443 (line No : 36)  
<VirtualHost \_default\_:1443> (line No : 121)  
ServerName [www.example.com:1443](http://www.example.com:1443) (line No : 125)

Step 4 : Test the PHP Program, Go to “C:\xampp\htdocs”  
Clear all files and create a new file “index.php” in “htdocs” folder

The screenshot shows a Notepad++ window titled "C:\xampp\htdocs\index.php - Notepad++". The menu bar includes File, Edit, Search, View, Encoding, Language, Settings, and Macro. The toolbar contains various icons for file operations and editing. The editor shows a single tab for "index.php" with the following PHP code:

```
1 <?php
2 echo "Name<br>Yash";
3 ?>
4
5
```

Step 5: Test the file “index.php” by calling localhost in web browser by using “http://localhost:4444” where “4444” is httpd port number we replace in step 3 above
